GENERAL INFORMATION

The Office of Statewide Health Planning and Development (OSHPD) annually produces this datafile which contains 300 elements of utilization data from the *Annual Utilization Report of Long-term Care Facilities (AURLTC)*. The datafile includes utilization information from reports filed by California's licensed long-term care facilities. OSHPD staff reviews each report for correctness and completeness. OSHPD contacts facility staff when data reported appear incomplete or do not conform to established edits. If necessary, corrections are made to the data in consultation with the LTC facility staff. Once the review process for all reports has been completed, the database is closed and made available to the public. The datafile contains data from the 2000 calendar year: January 1, 2000 – December 31, 2000.

Documentation, Datafile Format, and Importing Into Spreadsheet or Database Software

This documentation includes descriptions of each data element (data field). It may also be helpful to review the blank copy of the *AURLTC* 2000 reporting form (Appendix B).

Report form instructions can also be downloaded from the same website.

Due to the large number of data items, the data are separated into two files. **File one** (LTC0001.TXT) contains basic facility identification information and the data items from the *AURLTC*, pages 0 through 4. **File two** (LTC0002.TXT) contains the data items from report pages 5 and 6.

The files are in a comma-delimited text (TXT) format for use in spreadsheet and database applications. SAS and other statistics programs can also read the files. The first two rows are header rows containing field titles. The first row is an abbreviation of the field description. The second row contains field names depicting the location of the data from the Annual Utilization Report by 2-digit page, line and column numbers (e.g., P040201 where the total number of admissions to the facility is entered by LTC facility report preparers to page 4, line 2, column 1). The inclusion of two header rows is useful but care should be exercised when doing sorts that automatically include both header rows.

Most spreadsheet or database programs require that you import files through its import feature. We suggest that you review your software's import features before you double-click the TXT files in this package. (Double-clicking a TXT file with Windows Explorer, for example, will only result in Wordpad or Notepad automatically opening the file. TXT files must be imported into your application). If you are having difficulty processing the TXT file format, please review the Readme.txt guide that is included in this package. If you continue to have problems, contact a technical representative at Healthcare Information Resource Center (HIRC) at (916) 322-2814. Be aware that the OSHPD staff can only answer technical data questions. You must contact the software company's technical support service regarding operation of your software.

Number of LTC Facilities in the Datafile

There are 1,249 LTC facilities included in this datafile. Each line (row) represents one facility. There are 300 data fields that contain reported information from the facilities.

Datafile Description and Data Field Definitions

This section of the documentation includes a description of the datafile, its data fields, and provides brief definitions of some data fields.

Field Types and Notes

Item No.-----Each data field is assigned an item number and is referenced consistently throughout this documentation.

Column-----Indicates the column in which the data item is located if the file is imported into a spreadsheet.

Field Name-----The title of each data item that can be used as database names or spreadsheet titles. Titles are in abbreviated English field names or represent the report page, line, and column (as in the Utilization Report Form) of the data item.

Field Type--Indicates if field is TEXT, NUMERIC or CODED, as noted below:

T	Alphanumeric	Alphabetic and/or numeric data, left-justified, and space- filled
N	Numeric	Only numeric values, no punctuation, right-justified, and left-space-filled
SN	Signed Numeric	Only numeric values, no punctuation, right-justified, and left-space filled (leading hyphen for negative sign)
C	Coded	Data are coded directly from the inhouse Licensing File System (LFS) and are text.

Datafile Description and Data Field Definitions

The **Datafile Description** section describes the fields in the two datafiles and defines some data fields according to:

The number of the data field (item no.)

1. A spreadsheet column reference
2. The Page, Line, Column number according to the Report form item
3. A brief description of the field
4. The field type (text, numeric, coded, etc)

File One LTC0001.txt

Begins on Page 6

File Two LTC0002.txt

Begins on Page 9

The **Data Field Definitions** table defines the codes found in the coded fields using the Item Number coined in the Datafile Description section.
